

ASEC Sliding Door Gear Bifold

Description

The Asec Bifold is a door hardware system for interior folding doors, with no need for a bottom guide channel. The Bifold 16 is ideal for openings with non-rebated jambs as only a simple frame at the head is required to take the white coated steel top track.

Unlike top hung and bottom rolling models, the Bifold 16 is supported at the pivot base, with spring loaded guides at the head and is an ideal option for cupboards, pantries and room dividers. The pack contains the track, pivot set, hinges, guide and a fixing pack.

Features

- Contains track, pivot set, hinges, guide and fixing pack
- Various opening widths
- Uses spring loaded guides at the head
- Easy to install and adjust
- Designed for use without a bottom channel
