

ASEC Door Chain with Fixing Kit

Description

This Asec Door Chain with Fixing Kit is an innovative take on the traditional door chain design, featuring external key release and internal chain access. The chain body uses a simple push in engagement with a standard external rim cylinder which enables the chain to be disengaged externally with a key in emergency scenarios (ideal for people such as carers to gain access while the chain is on the door) and it can also be easily released using a push button. This particular model is supplied with a fixing kit for easy and convenient installation (please note cylinders are supplied separately).

Features

- Modern alternative to traditional door safety chains
- Available in a variety of finishes to match other door furniture
- External key release
- Easy push in chain engagement and push button release
- Supplied with fixing kit
- 150mm chain length
