

Description

The CAL door handle easily attaches to the CAL Double Bolt Lock, to enable it to be used as a handle as well as a highly secure lock.

The CAL lock works by securing the door to the frame at two security points and preventing any movement of the door. With its double locking action, the CAL lock makes it virtually impossible to remove the door by lifting off its track.

Features

- Can be used as a repair handle on it's own
- Designed to fit onto the L18711
