

MASTER LOCK 1174D Open Shackle Combination Padlock

Description

Part of the Master Lock ProSeries®, the 1174D is made from corrosion resistant stainless steel with a hardened steel open shackle and it has a shackle seal and dial dust cover to protect components. It features a resettable 4 digit combination, with no special reset tool required to operate it, and there are 10,000 potential combinations. With a deadlocking mechanism to help resist prying and shimmying lock attacks, this padlock is designed for commercial/industrial applications.

Combination Mechanism
