

SILCA Transponder Chip T80+

Description

This Silca Texas T80+ transponder chip will clone transponders for a large portion of the most popular Ford, Toyota, Hyundai and Kia models globally. It is also capable of pre-setting 80 bit transponders for Subaru vehicles ready to be programmed with a diagnostic device.

It works in conjunction with the Silca RW4 Plus or Fast Copy Plus device and the M-Box device (M-Box not required for Toyota vehicles) without requiring a snoop device. The Silca T80+ is compatible with the entire range of Silca automotive keys: Remote Car Key (CIRFH1), original remotes, Look A-like keys, and MH-TA Keys, and it is capable of cloning approximately 97% of all vehicles using 80 bit transponders.

Contains A Transponder Chip

Features
