

TROJAN Stallion Reverse Espag Shootbolt

Description

The Stallion Reverse Espag Shootbolt from Trojan is a PAS 24 accredited reverse action shootbolt attachment which has been fully tested to BS EN 1670 (grade 4 classification exceeded) and performance tested to 30,000 cycles under operational load. This extensive product testing proves the Stallion to be a reliable choice of shootbolt, with a stainless steel construction for corrosion resistance and easy to install one-piece assembly. This shootbolt features twin reverse action cams which are compression adjustable and assist in ensuring a high level of security by using the localised reverse action which allows the cams to locate from both directions into a central keep.

10 Year Guarantee

Complies To BS EN
1670

PAS24
