

Description

This multipoint locking unit from Fullex is based on their popular Crimebeater lock, with an added slam shut feature. This model has an inbuilt actuator unit between the centre case and the top bolt which triggers the bolts when the door is shut (a single turn of the key then locks the door) to allow for reliable closing and fire safety. It is ideal for use on fire doors and has been tested for 60 minutes fire resistance.

Designed for use on both composite and timber single doors, this full locking mechanism has been tested for corrosion resistance to BS EN 1670 Grade 5 (480 hours) and cycle tested to 50,000 operations. Additionally, it is supplied with a dual spindle and a strike plate and it is recommended for use in conjunction with a 3 Star Kitemarked TS007 cylinder for maximum security.
