# CODELOCKS CL5510 Smart Lock - Manage Via Your Smartphone

Description

The Bluetooth enabled CL5510 digital lock from Codelocks combines advanced programming with convenient smartphone management and operation thanks to the K3 Connect App. Simply download the K3 Connect App to your Bluetooth enabled smartphone to manage the lock from the palm of your hand including programming, access code generation, smart card distribution and audit trail tracking. Andriod and iOS compatible, the K3 Connect App allows building managers to manage all aspects of the lock remotely thanks to advanced wireless technology.

The lock supports a total of 350 users with a choice of entry options including 100 user codes, 150 MIFARE® smart cards (or fobs/wristbands) and 100 phone clients. Tight entry control can be achieved through the use of timed NetCodes. Generated and distributed by email and SMS, these NetCodes can be created with a start date and duration. When this pre-set duration has passed, the code will expire and access using this code will cease.

The CL5510 features an audit trail facility which allows users to download a history of code/card use to analyse the movement of staff or clients through you building. Other advanced programming facilities include scheduled `code free` periods and timed access codes with a set duration and expiry.

Clean by Codelocks is an optional finish available to special order on many Codelock products. The clear coating combats SARS-CoV-2 coronavirus (COVID-19) and can reduce bacterial growth by 99.96%*, providing an additional measure of protection over sanitisation. Clean by Codelocks features an ISO certified photocatalytic coating which offers enhanced protection against viruses, bacteria, germs and

other environmental toxins. For full details please view the data sheet in the associated documents or to order please contact our Specials Department.

Supplied With 2 Keys   **Works With An App**   **Combination Mechanism**   **Key Override Facility**   **Reversible Handing**

Features

- Set codes for a specific start time and duration with NetCodes
