

CODELOCKS CL160 Easycode Digital Lock

Description

The CODELOCKS CL160 Easycode Digital Lock is a lightweight, mechanical push-button lock with mortice latch, featuring the EasyCode Function, which requires the lock to be removed from the door to change the code, ensuring management control over security in the workplace.

The optional QuickCode Function allows code holders to change the code while the lock is still fitted to the door, making this a convenient option for trusted code holders, and doors for which regular code changes are required. The CL160 is an adaptable product with 3 choices of latch size, an optional hold-open function, and is suitable for both right and left handed applications. With a 12 button keypad, this item allows for 1000+ 4-6 digit code combination, and can also be retrofitted to existing CL155 and similar products.

Clean by Codelocks is an optional finish available to special order on many Codelock products. The clear coating combats SARS-CoV-2 coronavirus (COVID-19) and can reduce bacterial growth by 99.96%*, providing an additional measure of protection over sanitisation. Clean by Codelocks features an ISO certified photocatalytic coating which offers enhanced protection against viruses, bacteria, germs and other environmental toxins. For full details please view the data sheet in the associated documents or to order please contact our Specials Department.
