

WD-40 Specialist Fast Release Penetrant

Description

The Specialist Fast Release Penetrant from WD-40 is ideal for the quick release of rusted, corroded and seized parts. This penetrant has a very low surface tension, meaning it can penetrate rust, seams and tightly bonded threads to easily saturate and lubricate seized fixings.

The Smart Straw and 360° valve allow for precision application from all angles. It can also be used as a preventative spray to prohibit the build up of rust and corrosion and it is suitable for use on metal, rubber, plastics, alloys and most paints.

Features

- Lubricates to prevent rust and corrosion
- Loosens seized fixings and mechanisms
- Quickly penetrates and releases rusted or corroded parts
