

Description

The TR36 Vehicle Tracker and Immobiliser is an advanced method of tracking vehicles and fleets, and it is supplied with the optional iButton which allows you to identify the driver ID and grant permission to start the vehicle. The tracker has a built in 8MB buffer for recording driver routes and features multiple alarms to regulate driving behaviour and monitor safety as well as location and speed. Clear maps are provided by Google complete with traffic information, and the app allows users to view recorded information including history, speed and tracking reports, as well as live location view.
