

SILCA Futura Edge Key Machine

Description

The Futura Edge Key Cutting Machine from Silca is designed for duplicating both flat and cruciform residential and vehicle keys, by indirect and direct code. Futura Edge is ideal for use by locksmiths specializing in residential flat keys as well as single and double-sided automotive keys. Due to the software guided procedures, this machine is easy to use for both experts and inexperienced key cutters alike, while its compact size make it suitable for small sized shops and vans.

The Futura Edge has a user friendly interface and provides a practical workstation with an area for accessories on top. The integrated LED status lights change colour according to the machine status; white indicates the machine is ready to proceed, yellow indicates the machine is currently cutting a key and green indicates that the key cutting process has been completed.
