

SQUIRE Stronghold Long Shackle Padlock Body Only To Take Scandinavian Oval Insert

Description

These body only Squire Stronghold long shackle padlocks, with a solid hardened steel body and hardened boron alloy steel shackle, offer a high quality locking solution and are specially designed for easy and secure fitment of external Scandinavian Oval cylinders with no need for extra modifications. The padlocks have an electrophoretic anti-corrosion finish and are CEN approved (the CEN Grade applies to the padlock on its own and will be affected by your choice of external Scandinavian Oval cylinder). Please note that the design of Scandinavian oval cylinders can vary with some having a 'Tang' on the back of the cylinder, and others having a 'Slot' on the back of the cylinder. If the external Scandinavian oval cylinder you are using has a 'Tang' on the back then you need to order a 'Slot' version of the padlock you choose. Equally if your external Scandinavian oval cylinder has a slot on the back then you need to order a 'Tang' version padlock.
