

BEE-SECURE RFID Flip Up Wallet

Description

This Bee-Secure RFID Flip Up Wallet is RFID tested and secure and protects your data by blocking a wide range of signals including phone calls, WiFi, GSM, RFID, NFC, 4G and Bluetooth, and can also prevent contactless card fraud or hacking. The wallet can hold up to 6 cards with a lever at the base of the case which provides easier access to your cards. When the lever is pushed back, it conveniently pops each card up at a separate level so you can easily pick out the card you need without having to open up the entire wallet. The 100% leather wrap has room to hold notes and up to 1 extra card and stud fastens for safety. It has an aluminium casing which prevents deterioration of cards that can often split or crack when incorrectly stored due to becoming brittle.

Features

- Convenient card access
- Stud fastens for safety
- Blocks a wide range of signals
- Convenient access to up to 6 cards thanks to pop-up function
- 100% leather wrap with aluminium casing
- RFID tested
