

Description

The MILA Pro Secure handle range is Secured by Design (Police approved specification). It combines visible security features with concealed reinforcement technology therefore providing ideal protection against cylinder and handle snapping. It is suitable for UPVC, composite, GRP and timber doors. Alongside the anti-drill, anti-grip and anti-snap technology, a deep-drawn steel subframe inside the zinc alloy backplate provides reinforcement for extra strength and stability.

The handle has been successfully tested to TS007:2012 and has achieved BSI's two star Kitemark™ accreditation, plus it has been tested to BSEN1906: Grade 4, successfully achieving 200,000 cycles. It is mounted on a 240mm high backplate, it has 92mm 62mm centres, 211mm screw centres and is suitable for a locking mechanism that takes a euro profile cylinder.
