

ASEC Lockmaster Copy Lever Operated Latch & Deadbolt Single Spindle Gearbox

Description

This ASEC Lockmaster Copy Lever Operated Latch & Deadbolt Single Spindle Gearbox is suitable for Lockmaster multipoint locks. The single spindle gearbox is operated by lifting the lever to engage locking mechanisms and one full turn of the cylinder to lock, and one full turn of the key then push down on the lever to unlock. It is an ideal solution when the centre case gearbox is the only component which needs replacing within the locking mechanism. The gearbox is reversible and so suitable for both left handed and right handed applications.

35mm Backset

92mm Centres

Operated By Euro
Cylinder

Reversible Handling

Features
