

SQUIRE SS100 Stronghold Open Shackle Padlock Body Only

Description

The SQUIRE SS100 Stronghold Open Shackle Padlock Body Only is purpose-designed for extreme resistance against the threat of a sustained attack. This seriously heavy duty padlock is constructed of a solid hardened steel lock body, which is capable of a tensile pull of over 24 tonnes, and a hardened boron steel shackle. Uniquely, the Stronghold® range features an electrophoretic finish for excellent corrosion resistance and can withstand even the harshest environments. This 100mm wide padlock is ideal for commercial premises where extra high security is a priority - it is the only padlock ever to achieve the Loss Prevention Certification Board (LPCB) SR4 Standard. This open shackle body only version accepts the Ewa ICS and EPS KIK-SS cylinders. The benefits of the incorporation of a cylinder mean that this padlock is ideal to integrate into a masterkey system or that the locking mechanism can be changed cost-effectively without the need to replace the whole padlock.

Weather Resistant

Features

- To suit Ewa ICS and EPS KIK-SS cylinders
- Body and hasp only
- The Loss Prevention Certification Board SR4 Standard
- Hardened Boron alloy steel shackle
- Electrophoretic finish offering excellent corrosion resistance & salt spray tested for over 200 hours
