

MINDER Cash Minder 2 in 1 UV Light Pen

Description

The MINDER Cash Minder 2 in 1 UV Light Pen features a 365nm UV bulb and a money detector pen and works on both paper and polymer notes. The pen can be used on all paper notes, marking the currency - a genuine note will show a clear mark, and a dark mark indicates that the note is counterfeit. The integral UV light can be shone over both paper and polymer notes to detect the hidden UV features within genuine currency. The UV bulb can also detect forensic substances such as Smartwater™ and SelectaDNA™, plus any forensic liquid deterrents commonly installed in cash machines, making it an ideal tool for crime prevention and theft deterrent.

Features
