

UNION GripSafe Anti Viral Door Handle Strips

Examples of use

The tape can be used on all smooth and metallic surfaces. The application on handles is recommended because the adhesive does not peel them.

Push handles, handrails, shopping carts, and much more.

Description

The UNION GripSafe Anti Viral Door Handle Strips come in a pack of 10 and measure 10cm x 8cm, they can be cut down on site to the correct size and are self adhesive for ease of fitting. International studies have repeatedly proven that copper has antiviral, antibacterial and fungicidal properties, shortening the half-life of viruses, bacteria and fungi. The latest laboratory results also independently confirm the effectiveness of UNION GripSafe. The Eurovir® hygiene laboratory was able to prove that TGEV corona viruses on the tape are 99.98% inactivated after only 60 minutes. Please see the enclosed datasheet for full product and fitting information.

Features

- Can be cut down on site to fit
- Self adhesive and therefore easy to fit
- Anti-viral copper tape for handles
- 99.98% of corona viruses are inactivated
