# PAXTON KP75 Metal MIFARE Proximity Keypad For Use With Net2 Controllers

Description

The PAXTON KP75 Metal MIFARE Proximity Keypad (375-130) is a metal housed keypad and proximity reader that is suitable for external use. It is used with Paxton Net2 controllers and reads MIFARE 1k, MIFARE 4k, MIFARE Ultralight, MIFARE Ultralight C, MIFARE DESFire and MIFARE DESFire EV1 tokens. The reader is wired as shown on the control unit label and for ease of installation the cable exits centrally from the back of the reader making drilling and mounting very accurate.

A token is read by holding it within close proximity of the reader. Once a token has been read if the reader has been configured for code / PIN this must then be entered using the keypad. The control unit verifies the information and grants or denies access as appropriate. If access is granted the green LED flashes, if access is denied the red LED flashes.

5 Year Guarantee   Weather Resistant

Features

- For use with Paxton Net2 Controllers
- Reads MIFARE tokens
- 5 meter cable length
- three coloured LED indicators
- Five year product guarantee
- Robust metal construction
