

Description

The Hooply 506 Side lock, for use with Hooply gearboxes, are typically used in steel doors with side locks (not top and bottom shoots). They are suitable for multi-point locking steel hinged doors which connect only to the sashlock and don't push a rod out to the top and bottom of the door leaf.

They are also known as the lateral lock or multi-locking auxiliary locks. When combined (1 top and 1 bottom) they provide an additional 4 locking points to the Hooply security locking system and are sold singularly (not as a pair).

Reversible Handing
