

GU Secury Auto TENF With Standard Latch And 2 Deadlocks Square Faceplate 20x2285mm

Description

The GU Secury Automatic TENF is a Secury A2 opener latch and deadbolt multipoint system with 2 automatic deadbolts, 92mm centres and additional features. When the door is pulled shut the automatic latch bolts are triggered to lock the door securely, they are pulled back again when the lever used.

Should you wish to open the door from outside without the key the automatic locking can be manually overridden on a temporary basis with the daytime release function, which holds the top and bottom latch bolts in the withdrawn position and enables the central lock as a daytime latch. This is only achievable with the additional purchase of a TENF spring loaded interchangeable central latch release. The mechanical release integrates in to the strike and allows the central lock latch to engage providing the daytime release function.

This multipoint can be further upgraded to electric locking by adding a GU Secury Automatic Universal Motor.

45mm Backset

92mm Centres

Features

- Latch & deadbolt
- Automatically locks when the door is closed
- 20mm wide faceplate
- Euro profile lock case
- Daytime release function - when used with an interchangeable latch piece (available separately)
