

MACO C-TS Stable Door Lock Set

Description

This Maco C-TS stable door lock allows both halves of the door to be opened as one. It consists of a latch and deadbolt lock for the top half of the door with a separate hook locking point, and a key operated deadbolt lock for the bottom half with a separate hook locking point. The lever operated top half can be independently opened while the bottom key locking half remains securely closed. It is suitable for use on UPVC, timber or composite stable doors and is non handed.

35mm Backset

45mm Backset

92mm Centres

Reversible Handing

Features

- Top half of the door is lever operated with a soft latch and dead bolt as standard
- Bottom half of the door is key operated, when unlocked it automatically engages into the top half of the door allowing the stable door to form a single door.
- Silent latch function ensures easy closing of the door leaf
- In the closed position each half of the door has its own independent locking system
- Shootbolt locking from the bottom half into the bottom of the top door lock
- Non handed
- Suitable for use on UPVC, timber and composite door systems
