

Description

This Locinox H-Compact insert lock is designed for metal sliding gates with a minimum box section of 60mm. It is ideal for both manual and automated gates as the no handle design allows sliding gates to open and close without latching. The gate can be deadlocked as necessary with the stainless steel hook bolt and should be used in conjunction with the SHKC keep to provide a secure anchoring.

In addition the anti-theft pin which prevents lifting of the gate can be removed; making it possible to use the lock with swing gates.

3 Year Guarantee

Features

- Without self-latching bolt
- Suitable for swing and sliding gates
- Stainless steel
- 33mm hook throw deadlock
