

Description

This axis only module is to suit modular key and turn cylinders, the bar can be cut down to suit required length and allows existing stock to be modified to reduce stock holding. The ATA function is an adaptable axis which means the stem can be cut to length to allow a turn to be fitted 100% flush; these are often used to assemble cylinders for use in anti-ligature applications.

Features

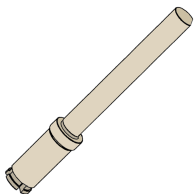

- Allows existing stock to be modified to reduce stock holding
- Bar can be cut down to suit required length
- To suit modular cylinders
