

SILCA Profile Reader Software 12 Months Access Subscription (Special Order Only)

Description

The Silca Profile Reader software is a tool that helps speed up the key duplication process by resolving the key cutter's biggest problem - identifying the correct key blank to use. By combining artificial intelligence, advanced algorithms, and a memory of over 6,000 residential flat and dimple key profiles, the Profile Reader suggests the best matching Silca reference to use for creating a duplicate key.

This subscription allows access to the software and it is also recommended to purchase the Lumi Profile Reader device which optimizes the lighting and background conditions to help make more accurate photos for identification.

Works With An App

Features
