

ADVANCED DIAGNOSTICS ADC222 Force Ignition Tool

Description

The Force Ignition Tool from Advanced Diagnostics allows the user to force the ignition on various makes and models (including Audi®, Volkswagen®, Seat® and Skoda® vehicles) via the OBD socket when a key is unavailable.

It is easy to use by simply plugging it into the vehicle's OBD port and then plugging your ADC250 master cable and Pro tester into the ADC222. When you press ON, the ADC222 automatically supplies an ignition feed via the OBD socket without the need for a key. The user can then read the pincode with the MVPro or AD100Pro prior to cutting a key.

Features

- Ignition on allows for pincode reading (selected vehicles)
- 16 pin OBD connector
- Connects to vehicle via OBD Socket
- Compatible with MVP Pro and AD100 Pro key programmers
- No external power source required
