

IVESS Anti-Lift Patio Lock

Description

The Ives Lock is a security device which prevents patio doors from being lifted off its rails from the outside allowing access to your home. The simply installed device is a keyless locking system that improves home security in minutes.

Features

- The more upward pressure that is exerted on the door the tighter it gets in the locking engagement
- The placement and angle of the locking pin prevents the door from being lifted up and also prevents the door from being pulled out
- The spring is not too strong to pull
- Easy to use handle knob
- Simple to operate
