

LOXTA Stealth Double Locking Lever Handle (Blank External) - 122mm 92PZ

Description

This pair of Loxta Stealth double locking lever handles is manufactured from high quality 304 stainless steel and designed with 30°C draft angles on the backplate to help resist mole grip attack. There is a euro cut-out and a thumbturn to lock the handle in place on the internal handle and the external handle has no euro cut-out.

This double locking feature provides improved security as the secondary turn allows for the handle rotation to be locked in place, so that it cannot be moved from the outside. The Loxta Stealth handles are an attractive and versatile product being non handed and available in multiple finishes, they are also unsprung and provided complete with fixings.

92mm Centres

Operated By Euro
Cylinder

Reversible Handing

Weather Resistant
