

MASTER LOCK M175EUR 4 Digit Combination Thermo Padlock

Description

The Master Lock M175EUR series padlocks are high security locks made from the toughest boron alloy material making it 50% stronger than a regular padlock. The padlock is extremely weather resistant as the 50mm zinc die cast body is chrome plated for extra protection, and the digits are covered. The double deadbolt locking also provides added protection against prying and hammering. Along with its resettable 4 digit combination, this padlock is convenient to use and particularly suitable to secure factory fences, sheds and/or store front gates.

Combination Mechanism

Weather Resistant

Features

- Double deadbolt locking for extra protection against abuse
