

MODERN Burglar Avider Sash Blocker With Alarm

Description

The Burglar Avider is a fantastic new product and the first of its kind, combining a sash stopper with a contact alarm to suit most door and window frames. The robust metal-bodied sash stopper prevents the doors and windows from opening in the first place, and if they are forced open, the 110db alarm will sound, alerting the user and deterring the intruder.

Supplied with 2 fixing screws, spacers and batteries, the Burglar Avider is completely wire-free and easy to install within minutes. A practical and affordable deterrent, not only does this product protect your home from burglary but it can also aid in child safety, preventing doors and windows from being opened by young children without permission.

Reversible Handling
