

PAXTON 326-735 Compact Vandal Resistant Proximity Reader

Description

PROXIMITY compact vandal proof reader is a single door access control system with all of the electronics within the housing of the reader. Compact systems can be installed to many doors over a site, all using the same cards. The compact vandal proof reader's cylindrical construction means that all the control electronics may be buried in a wall. This reader is ideal where access control is required on a door at risk of vandalism. The end cap is used as a marker, so users know where to present their tokens. A black end cap is provided with the reader. Six additional colours are also available through registered installers, allowing the most harmonious choice to be made for the building.

IP 67 Rated

Weather Resistant
