

Paxton PAXTON 477-222 Net2 Hands Free Interface

Description

The term 'Hands free access control' means the token that identifies a user is read from within a pocket or handbag. No hands required. This is useful for gates and barriers, loading doors and where disabled or elderly people require access. The Hands free interface, in conjunction with hands free tokens, achieve this using Paxton Access' unique wireless technology.

Features

- Requires no separate power source
- Uses wireless technology
- Wires in series with the reader
- Increases read range dramatically
- Convert existing or new P series readers or KP keypads to hands free
