

PAXTON 860-010G Switch2 Hands Free Proximity Key Fob

Description

The term 'Hands free access control' means the token that identifies a user is read from within a pocket or handbag. No hands required. This is useful for loading doors and where disabled or elderly people require access. The hands free tokens, in conjunction with the hands free interface, achieve this using the unique wireless technology. The keycard is a hands free token with additional functions. Pressing a button on the card momentarily boosts the range of the keycard, typically to 5m (maximum 50m).

Features

- Use with P and KP readers (with the hands free interface) and the Long range reader
- Works as standard passive token with non-hands free readers
- Up to 5m read range with the Long range reader
- Hands free key card increases the range to typically 5m (maximum 50m)
- From 0.85m to 2.5m read range with a hands free key fob
- For use with Switch2 systems
