

PAXTON Net2 Wireless PaxLock

Description

The Net2 PaxLock is a battery powered Net2 access control unit integrated in a slimline door handle, ready to fit standard Euro profile lock cases. The unit communicates with a designated Net2 server PC through the so called Net2Air secure & low power wireless technology. Designed for use with Net2Air Ethernet bridges, the PaxLock provides all the advantages of a wireless networked access control system. The Net2 PaxLock is simple to use, fast to fit and ideal for use on internal doors.
