

ADVANCED DIAGNOSTICS AD30 Transponder Coil Detector

Description

Using the AD30 is easy, simply place the AD30 near the ignition barrel, with the key inserted and ignition turned on/off (vehicle dependant) and it will provide an audible and visual indication of power present. On certain vehicles a further indication of a transponder signal being sent by the ignition key and received by the antenna, can also be provided.

The AD30 has been developed to assist with the diagnosis of all types of immobiliser systems using transponder technology and works on most makes and models of vehicles worldwide.

Diagnosing problems with immobiliser systems can be complex and there is always the question of "is the immobiliser antenna transmitting a correct signal to power the key transponder". By using AD30 this question can be quickly answered and will save you valuable time when diagnosing.
