

SILCA 4 - Bronze Key Cutting Package

Description

This starter package contains everything you need to start copying keys from identifying the correct blank through to professionally finishing the keys. Because of our extensive knowledge and experience, the key blank selection provided will allow you to be able to copy the vast majority of keys brought to you.

The package includes both our popular cylinder keyboard (42 blank types) and our popular mortice keyboard (40 blank types) which contain the most popular key blanks used in the UK; these boards come complete with 5 key blanks per hook (a total of 210 cylinder blanks and 200 mortice blanks).

The Silca Duo Key Machine can cut both cylinder and mortice keys, keeping the initial cost down and also saving bench space, ideal for where space is limited.

In addition to the key cutting machine, keyboards and key blanks there are a range of the most useful accessories to help you get started.

- Keyway panel, this lets you push a key through a keyhole shape to help identify the required cylinder key blank
- Pin & Pipe Gauge, this allows you to identify the correct gauge of mortice key blank
- File & Handle Set, this allows you to hand finish mortice keys for that professional finish
- Silca Catalogue, the ideal tool to quickly and easily identify the right cylinder blank.

This package is available to special order only and is despatched within 5 working days, please call our team on 0203 0076060 to discuss your requirement and help you enter this highly lucrative market.
