

WINKHAUS Cobra EFGA Latch, Deadbolt & 2 Hooks With Entryguard & Lockout Facility - 20mm

Description

The Winkhaus lever operated EFGA 2 hook multipoint lock with Entryguard and a lock facility has a 20mm faceplate and is ideal for use on UPVC & composite doors. The automatically engaging Entryguard bar restricts the door opening and provides home owners a more secure option than the traditional door chain. Key holders are able to disengage the Entryguard bar from the outside.

In addition to this, the euro cylinder operated lockout box can be used to lock out the operation of the centre case. This ideal for situations where additional security is required, such as leaving the property for an extended period of time.

With anti-push back hooks and a secure locking mechanism using sintered metal gears for increased lifespan, it's no wonder the Winkhaus Cobra range of multipoint locks is Secured by Design (Police approved specification).
